Elizabeth K. Joseph

• Automation & Tools Engineer at HP, focusing on OpenStack Infrastructure
• Recipient of the O'Reilly Open Source Award, 2012
• Author of The Official Ubuntu Book, 8th ed
What I do

- Automated testing framework engineering*
- Systems administration**
- Documentation (user and dev facing)**
- Giving talks**
- Writing about events**
- Community management
- Software testing
- Event planning

* paid
** sometimes paid
Why?
“Scratching your own itch”

- In the course of using a tool, you discover you want to make an improvement
- Contribute upstream so you don't have to carry local patches through upgrades
Be a part of the biggest software projects in the world
(or a big part of something small)

Maybe I don't need to tell you...

- Apache “Market share of active sites” is 52.27%
  (source: netcraft.com, May 2014)
- Firefox web browser
- Linux operating system
- Many smaller projects have 1-3 core contributors
Professional development

- Gives you real world experience with software projects without strictly requiring professional experience
- As you work, you're building up a serious, public portfolio of work on real software projects
International collaboration & travel

- Work with people from different cultures
- Work with people across different companies
- Travel the world to collaborate and work on the software through summits, conferences and more
Passion for technology & desire to share

- Working on technology projects makes you happy
- Wish to share the fruits of your labor freely with the world
- Belief in freedom, openness and/or equal access to technology
What?
Opportunities to work on many things

Programming, software packaging, bug triage, documentation, support, quality assurance, systems administration, design, marketing, event coordination, community

Or a creative mix of several of these
Getting started

• Start with a piece of software you use
• Go to the project website and look into how to contribute
• Sign up for mailing list(s), join their chat (IRC), visit their support forums
• Submit a patch/make a contribution
• Other resources:
  http://opensource.com/resources/ebook/how-get-started-open-source
  http://www.openhatch.org
Tips

• Respect the work of others, avoid insulting the work of your predecessors
• Follow procedures in place for contributions
• Follow through with commitments (or admit it if you can't)
• Focus on constructive criticism and comments
• Collaborate, don't fork
Getting a job
Network

• Attend open source conferences (hello!)
• Stay attentive to work that needs to be done in the community
• Engage with users
• Collaborate with other projects
Building your “brand”

- Have an active blog talking about your FOSS work
- Be active on social media with and about your project
- Speak at open source conferences
- Always say “yes” to press interviews
Being someone people want to work with

● Do your work openly with a public plan
● Work in a way that showcases your ability to collaborate
● Take time to mentor other project members
Companies to target for employment

• Open Source or Open Source core companies
• A company that uses Open Source and lets their employees contribute back changes
• A larger company or non-profit that has an Open Source-focused division
The interview

• Conference attendance policy
• Ability to contribute to open source projects
• Their commitment to use of open source
• Policy around forking and upstream contributions

Have a clear, thought out vision of which of these you are willing to sacrifice, if any
